

Forty-Eight Years Rendering Satisfactory Service in the Pacific Northwest

Few institutions in the Pacific Northwest country can date back their establishment over a period of Forty-eight years. In a new country, with constant changes taking place, new conditions arise, competition becomes more acute and many are called but few are chosen. During the past Forty-eight years from a little settlement Portland has grown to a city of nearly 300,000 people and become the third largest implement distributing center in the United States. Many great agricultural implement houses have been established and succumbed in the race for supremacy, but during all these Forty-eight years the house of

R. M. Wade & Co.

has forged ahead, keeping pace with the growth of the country and supplying a constant increasing demand for the best lines of implements specially adapted for Pacific Northwest conditions. The making of a successful business is no more of an accident than the successful growing of any thing else. In a country of Mountains, Plains and Valleys like ours, with varying altitudes and consequent varying conditions of soil and climate, the development and growth of a successful agricultural implement business presents many problems unknown and not readily understood by the eastern man, where soil and climate are very much the same over entire states. Here the well posted implement man knows that the plow which gives satisfaction in the valley will not even "scour" on the mountain side not two miles away. This is but an illustration of a thousand problems which we have been successfully solving for the past FORTY-EIGHT years, and it is our success in studying these conditions and in so applying our lines that we can point with pride to

Forty-Eight Years Satisfactory Service

The following pages indicate lines which experience has taught us will meet your difficulties with success. You take no chance when placing these lines on your farm. They are of the highest type of manufacturing skill and guaranteed to render satisfactory service at all times. We desire to take this opportunity to thank all our old friends of Mr. R. M. Wade for their many years of patronage and to extend to the new farmers and homeseekers from the East an invitation to visit our great warerooms, see for themselves the wonderful exhibit of implements constantly maintained and become a part of that great army of Pacific Northwest farmers who have helped make us the greatest implement house in the Pacific Northwest today.

THE LITCHFIELD DOWN-LOW SPREADER

THE LITCHFIELD STANDARD HEIGHT SPREADER represents a known quality in spreader results, the world over. Successful Distribution—Light Draft—Lack of extraordinary strain and stress goes to make other spreaders a constant source of repair troubles—these statements stand uncontradicted.

OUR NEW DOWN-LOW SPREADER embodies the same Light Draft—the same Traction Capacity and the same Efficiency in every respect which is found in our medium height machines. These are things which it has been absolutely impossible to accomplish in other makes of low spreaders.

THIS DOWN-LOW SPREADER will drive over just as high a stump—will go through just as bad a ditch and clear just as the ground, as our high machines. Compare this with those spreaders which hang so close to the ground that they mire themselves in soft places and cannot clear many of the usual road obstructions.

THIS SPREADER IS LOW—the top rail being only about waist high. We accomplish these remarkable results because of the Litchfield BULL DOG BEATER WHEEL and the Litchfield NO-CHOKE BOX combined with other special features which go to make this modern manure spreader years and years ahead of all competition.

Hauls 10,000 and No Axle

To find out how much our Patent Outer Bearings add to the strength of our axles, we took a little 2 3/4-inch cast skein gear out of stock made for the Georgia trade, cut out 17 1/2 inches of the hind axle, loaded on 200 bars (5 tons) of steel tire and drove it all around our yards, over railroad tracks and other obstructions. The wagon stood this severe test without even a break in the paint. Then we took another wagon made WITHOUT the Outer Bearing Axle and put on just two-fifths of the load (80 bars—2 tons). Before the wagon had gone sixty feet the wheels spread so it was impossible to draw the load.

WINONA and RUSHFORD WAGONS with OUTER BEARING AXLES get there with the load every time.

400 to 1500 Gallons Per Hour

Plenty of Water Whenever and Wherever You Want It

No trouble! No work! No pumping in freezing cold or sultry summer! The Farm Pump Engine will provide all the water you need for the house, dairy, barn, feed lot, pasture—anywhere you want it.

Works right outdoors in any weather. Provides water at the right temperature—no tank heater needed in winter. Costs less than a good windmill. Does ten times as much work. Saves two men's wages every day it runs and never grumbles about long hours or "loafs" on the job.

Attaches to Any Pump in 5 Minutes

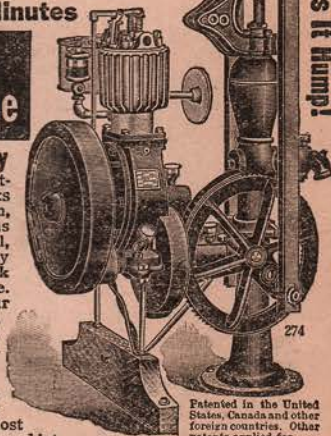

Fuller & Johnson Farm Pump Engine

Ample Power for Small Machinery

Has pulley for running any hand or foot-power machinery. Helps the women folks by turning the cream separator and churn, the washing machine and wringer, etc. Runs the corn sheller, fanning mill, feed mill, grindstone. Does most all the drudgery chores in half usual time. All ready for work—no extras to buy. Comes on its own base. No foundations or platforms needed. Four small bolts fasten it to any pump. No belts, shafts, arms, walking beams or anchor posts. Easily moved anywhere on a wheelbarrow.

See the Engine at Work

We have a Farm Pump Engine on exhibition in our show rooms. It is at work most all day doing the kind of work that is most tiresome to the farmer. Bring in the family and let us show you how this Farm Pump Engine will do your hardest winter work at small cost.

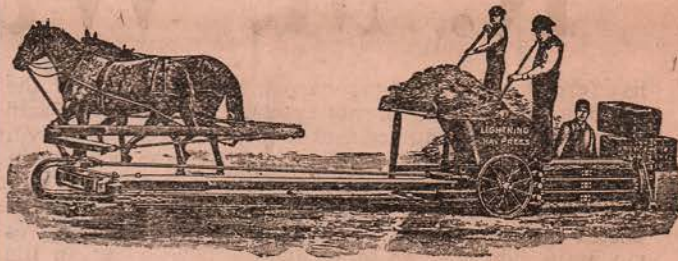

Patented in the United States, Canada and other foreign countries. Other patents applied for.

Any Pump and Makes It Humpl!

A size for Every Need

R. M. WADE & CO., Portland, Ore.

The Celebrated LIGHTNING HAY PRESS

THE name "Lightning," as connected with Hay Presses, has in the 25 years existence of the Company, become a household word in the Pacific Northwest.

There is a reason for this in the fact that the Lightning Power (the business end of a Baler) has never been equalled by anything yet placed on the market for simplicity, strength and durability. We have customers today who tell us of using Lightning Presses over 20 years that are still doing the best of work.

In this line we carry Presses of light construction for light work—Presses with Steel Pitman or Wood Pitman. We have perfected a Self Feed Attachment with which we can equip Lightning Presses when wanted, and Our Belt Presses meet the demand for greater capacity with a machine to be operated by gasoline or steam power.

With this line we are convinced of our ability to suit the party who wants a first-class Baler.

Our Belt Press trade led us to make a TRACTION GASOLINE ENGINE for operating such a machine and hauling over the roads, which has proven to be the most economical power than can be used.

- HAY PRESSES: HORSE POWER AND BELT POWER
COMBINED OUTFIT: PRESS AND ENGINE
GASOLINE ENGINES: TRACTION, PORTABLE AND STATIONARY
SWEEP RAKES AND STACKERS POWER FEED GRINDERS
STUMP PULLERS WAGON AND PITLESS SCALES

SINGLETREES

Every farmer should have extra singletrees on hand in case of unexpected breakage. We handle the best line of its kind in the United States, made by the Park Manufacturing Co., of Minnesota Transfer, Minn. These Singletrees are made from the choicest selected second growth, and are absolutely guaranteed to be made from the best material, without flaw or defect. Insure your life and stock against future trouble by using a **GUARANTEED SINGLETREE.**

GENUINE SOUTH BEND CHILLED PLOWS

The South Bend Chilled Plows have won their reputation on merit. It is based on quality. The quality starts with the raw materials, and only the best are allowed to enter into their construction. The workmanship is that of experienced and competent mechanics, each striving to produce the highest standard of perfection. Long experience has enabled us to develop shapes and patterns that have superior turning qualities. The Flanged Land-sides cause the Plows to run steady. They are, therefore, easy to handle. Can you find as many excellent points in any other Plow as the Genuine South Bend? They mean quality, economy and efficiency to you, and are fully guaranteed.

The Chattanooga ONE - HORSE WAGON

Everyone cares more for demonstration than promises on paper and the Chattanooga has been making good for years in the Pacific Northwest under the most trying conditions. We put a quality of material into this wagon that is equalled by no other manufacturer, giving it a greater load capacity which, with light draft, makes it the equal of any farm wagon on the market today. The next time you buy a one-horse wagon, get a Chattanooga.

Our Two-Way Harrow

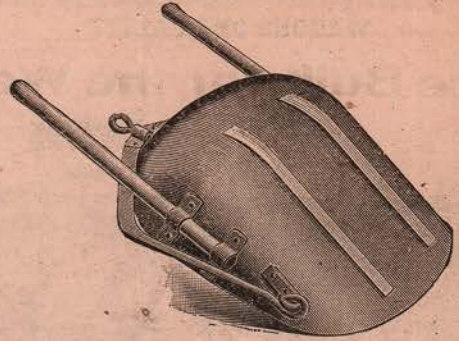

Our Dandy Disc Harrow with Two-Way Attachment, has a Flexible, Detachable Rear Frame, Rear Gang In-Throw and Front Gang Out-Throw.

First you have the famous Dandy Disc, practically an All-Steel Harrow, with reversible ball-bearing boxes, insuring light draft and durability. Adding to this efficient tool the Two-Way Attachment, with its cut-out Discs, and you have the most perfect harrow, cultivator and pulverizer made.

MOISTURE and AIR are necessary to allow some soils to work up fine, and such soils are best prepared with the two-way harrow, since the front discs open the top of the ground and expose and turn up the soil, which is immediately recut and pulverized by the rear cut-out discs, leaving no ridges. The use of this machine makes the best seed bed possible.

American Steel Scrapers

Are preferred and used by those who look for the full value of their money.

American Steel Scrapers

Wear longer because they have an extra thick center, a flange top and high back and sides, which insure great carrying capacity.

AMERICAN STEEL SCRAPERS enter the ground easily because the point is correctly shaped.

AMERICAN STEEL SCRAPERS are light draft because they are so balanced as to ride without friction. For leveling sage brush land, making contours, ditching and road work the AMERICAN STEEL SCRAPER will wear longer and give more lasting satisfaction than any other make on the market today.

The Powerful Smalley Force Feed Alfalfa Cutter

Our No. 40 alfalfa cutter equipped with chain drive blower to elevate alfalfa at slow speed to suit the demands of the operator, sold in this territory for many years, is now being successfully used at Pendleton, Oregon, Toppensish, Wash., Sunnyside, Wash., Weiser, Idaho, Parma, Idaho, and many other points in this territory. The blower is built independent of the alfalfa cutter and therefore can be equipped with small sprockets for high silo work, or large sprockets for slow speed in elevating only a short distance.

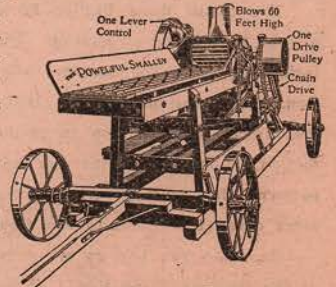

The Smalley is positively the best, cleanest working Cutter and Filler in the world. It is so perfect that 4 out of every 5 Cutters in use are the Smalley kind.

You don't want a commonplace slit-apron Alfalfa Cutter. Get an up-to-date machine of the force feed type—a Smalley. It will save you many an hour's work and many a sore back. And you'll always have the highest grade Alfalfa.

Don't worry about how high your Silo is. Just leave it to the Smalley to do your filling as well as cutting.

The Smalley handles corn, oats, peas, alfalfa, etc., whether dry or green. (Alfalfa grinding screen furnished where wanted on size 20-26-36 Alfalfa Cutters and on all sizes of Ensilage Cutters.)

Don't wait till the last moment to investigate Alfalfa Cutters and Fillers. Send a Postal now and get the new Smalley Catalog, the finest we have ever printed. It is free. Write

Bemica Jackson Derrick Fork

This is the most valuable tool of its kind ever placed on the market. It is designed and built for reducing the cost and trouble in stacking hay. The plan used in its construction gives the tool the name of being the easiest to operate and the one that saves the most time in handling hay of all kinds. It is compact and equally balanced.

The TRIP LATCH, being made of DROP FORGED STEEL, is practically indestructible, and in fact the entire tool is made to resist all reasonable abuse.

Every Year Adds to the Evidence That Quality In a Separator PAYS

YEAR after year, more and more farmers are realizing that the highest quality separator pays the biggest dividends for the longest time. The experience of men who bought only on a low price basis has served as a warning against buying "cheap" machines. Men who have purchased Great Western Separators are actual living proof that it is the best economy to pay a fair honest price for quality. Be fair to yourself. Get a separator that skims close for a lifetime. Get a separator that is always easy to turn. Get a separator that is easy to clean as long as it lasts. Get a

Great Western

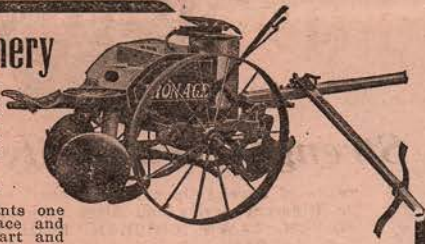

if you want the most a separator can be—the best separator investment you can make. The Great Western is the only separator with a skimming system that follows nature's laws—the milk sinks, the cream rises. There is no chance of their mixing—so you get the utmost in quantity and quality of cream—even when skimming cold milk. It is self-draining and self-flushing; there are no long tubes, no minute slots, corners, crevices, or ragged edges to hold milk and collect dirt. The Great Western is ball-bearing throughout. The balls we use are absolutely uniform in size and test 50 to 100% harder than balls others use. The ball races in the Great Western are tempered so hard that you can not cut them with a file. Low swinging tank and low gears with high crank, mean greatest convenience, least vibration, velvety cream and longest wear without repairs. We will arrange to give you

Any Kind of a Trial You Want on the size Great Western that best meets your needs, no matter what number of cows you own. Test the Great Western side by side with any other separator. Try them both on any kind of milk—warm, cold or stale. See how much better the Great Western is in every way. See how much finer the Great Western is made—note how much stronger the materials are—how much easier it runs, how easy it is to clean and keep clean and sweet. Then decide. We know that the Great Western beats them all. Comparison will prove it to you.

Art Book Free Drop us a card today and we will send you without any expense or obligation our beautiful art catalogue showing the Great Western in natural colors and also our million-dollar 5-year surety bond. Shows best methods of separating, gives results of extensive experiments and information on separating not found elsewhere. Proves Great Western superiority. Mail postal today.

THE WOLVERINE JUMBO HAY PRESS

This is the machine with which Mackey & Ealy of baled 73 tons 355 lbs. and moved 3 times; on another One crew made a RECORD RUN of 24,300 pounds of hay in one hour. The Jumbo is built under the specifications of the best hay press man in the Pacific Northwest, and has so completely eclipsed all former records that it stands today without an equal.

The big tonnage that the JUMBO is capable of handling day in and day out is made possible by our patent double spring tension on both ends of tying chamber; this double tension feature is only to be found on the WOLVERINES and we absolutely guarantee 20 per cent more tonnage with it than any other press built. Some builders of presses advertise powerful double T tensions, but unless you have springs at both ends of tying chamber, T tensions are no better than the old-fashioned shoe at rear end. Our double tension is the only practical one yet invented, as it holds the hay where the plunger leaves it and does not have to be pressed over again. This means 20 per cent less power and 20 per cent more tonnage and makes it possible for the WOLVERINE JUMBO to be recognized today as the world's greatest hay press.

Every seed laid in a packed seed bed—at the very bottom of the furrow. The soil is then released, covering the seed perfectly at a uniform depth below the surface. Seed can't be picked up by birds or blown away by wind.

Do You Own A Farm?

Perhaps you don't superintend the actual work of planting on your farm. But from a business standpoint it is your duty to place the merits of the Peoria Drill before your manager or your tenant. Has it ever been brought home to you how important it is that every grain of your fine seed be planted at just the right depth and at the same depth with all the rest of the seed? To be certain of this result you must have

The Peoria Drill

Produces Larger Crops—From Less Seed

The Peoria Drill makes every single seed grain a positive factor towards a bumper crop. There is no waste. The result is larger crops from a smaller amount of seed. The special construction of the Peoria Disc Shoe not only prevents seed being lost at the surface, but assures a level, even seed bed, no matter what the depth. That means that the stalks start at the same time—mature at the same time. The Disc readily cuts trash and opens up the hard ground and a shoe forms furrow and deposits the seed accurately. We guarantee high efficiency at all depths. The Peoria Drill is built in plain pattern or with fertilizer attachment.

R. M. WADE & CO., Distributors

Is the only one equipped with this Disc Shoe Furrow Opener. So the New Peoria is the drill that is sure to increase your crops and save your seed. It is the drill that insures every seed the three essential requirements for successfully growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria. Do not think that the wonderful Disc Shoe Furrow Opener is the only advantage of the New Peoria Drill. Every other part is just as superior. Let us prove it. Let us send you a booklet and all the facts and figures, also opinions of men who know. Send your name and address on a postal now. It's worth money for you to know all the details.
